

## Surescripts Medication History

### **What is Surescripts?**

Surescripts connects pharmacies, care providers, benefit managers, and operates a network to allow for the movement of electronic clinical health information between different health information systems. Through the Surescripts network, authorized prescribers and pharmacies can gain access to prescription information and related information for use in providing clinical care to patients.

### **What is the Medication History?**

The Surescripts Medication History service allows prescribers and pharmacists to use the Surescripts network to access a patient's medication history across providers, at the point of care. This service can be used in the course of providing routine care, as well as during emergencies. In both cases, Medication History enables health care providers to make a more informed clinical decision. To provide this service, Surescripts connects to a patient's medication history data stored in the databases of community pharmacies and pharmacy benefit managers. Surescripts then presents that data to prescribers through software from a certified vendor.
